SUMMARY

Senior software engineer and systems architect with **9 years** building **data-intensive platforms** across **finance and healthcare**: ledgers, reconciliation and AP automation; AI medical assistants, claims and lab pipelines. Takes products from architecture to production across backend, data, web and mobile, and builds **AI agents and workflows that automate engineering**.

WORK EXPERIENCE

Light | Remote

Dec 2025 - Present

Senior Software Engineer, Procure-to-Pay & Record-to-Report

Product and platform engineering for financial software.

- Built **procurement, payment and approval workflows** for finance teams to manage spend and accounting controls.
- Delivered **financial reporting and exports** for day-to-day finance operations.
- Own **discovery, architecture and delivery** across backend, web and infrastructure.
- Improved **reliability and performance** with database tuning, resilient background jobs, tests and observability.
- Built **AI-assisted development and review workflows** with reusable agent instructions and skills.

Ankor.app | Sweden, Remote

Jul 2025 - Nov 2025

Senior Software Engineer

Led a financial reconciliation product from inception to production.

- Built **settlement tracking, audit trails and ML-based refund accrual forecasts** to help merchants track payouts and account for expected refunds.
- Integrated **5+ payment providers** into a multi-tenant platform processing millions of transactions monthly at **98%+ reconciliation accuracy**.
- Built dbt/Python pipelines across PostgreSQL, BigQuery and DuckDB for transaction matching, multi-currency accounting and automated double-entry journals.

Adia Health | formerly Flow Health, Remote

Jan 2021 - Jun 2025

Senior Software Engineer

Led development of an AI medical assistant for laboratories, physicians and insurers.

- Built **AI-assisted diagnosis and test recommendations**, alongside insurance claim filing and fee-schedule workflows.
- Made medical histories and lab results usable in the product through **vector search**, structured ingestion and Sysmex analyser integration.
- **Recovered ~1.5 billion records** after a complete production database loss by reconstructing and replaying events from Kafka, CloudWatch and S3.
- Migrated Cassandra to DynamoDB, improving reliability while **cutting maintenance and cost by 90%**.
- Reduced graph-query latency by **35%** and service latency a further **20%** through data-model changes and concurrency fixes.

PROJECTS

Kin.app | [App Store](#) · [Google Play](#) · [Website](#)

Jan 2026 - Present

Designed, built and shipped solo: an iOS and Android app for splitting receipts by item. Kotlin backend, React Native app and Python receipt scanner.

- Built a **double-entry ledger** with traceable debt settlement and reversible corrections.
- Developed an AI receipt scanner at **~0.8¢ per scan and ~9s latency**, evaluated on 70 receipts.
- Combined coding agents and manual review with **150+ automated architecture rules** and end-to-end tests.

peel | [GitHub](#)

Jul 2026 - Present

Open-source Go terminal app that combines code review and Git staging. Distributed through Homebrew.

- Built comments that follow code through edits, with structured feedback for coding agents.
- Integrated **Claude Code and Codex walkthroughs**, live refresh and resumable GitHub PR reviews.

iCloud Image Labeler | [GitHub](#)

Built a Python tool that makes Apple Photos searchable with AI-generated keywords, captions and OCR text for photos and videos. Supports **local models through LM Studio or Ollama**, with automatic metadata write-back and background processing.

EARLIER EXPERIENCE

CoatConnect | Software Engineer, Cairo

2019 - 2020

Improved a medical events portal to **1.7s Largest Contentful Paint**; built shared UI components and server-side rendering.

BirdCloud | Software Engineer, Cairo

2017 - 2018

Built client software and shared libraries that enabled **20% more clients and 30% revenue growth**.

SKILLS

Languages: Kotlin, TypeScript, Python, Rust, Go, SQL

Platforms: PostgreSQL, AWS, GCP, Docker, Kubernetes, Terraform, React, React Native

AI & engineering: Claude Code, MCP, LLM evaluation, vector search, CI/CD, observability

EDUCATION

Bachelor of Science, Computer Science

2018 - 2022

English: bilingual · Arabic: native
